### **INSTALLATION AND SETTING**

- BEFORE INSTALLATION, ISOLATE THE SUPPLY.
- Connect the Auxiliary and Monitored Inputs as required.

### Setting the unit

- Set the "Hyst. / Mode" selector to the required position depending whether under or over monitoring is required. Select either a suitable hysteresis setting of 2% or 10% or choose Latch if required.
- Set the "Range" 6 to the required position (depending on monitored input voltage to be monitored).
- Set the "Trip Level %" 句 and "Delay" 🔇 to suit the selected monitoring range and delay to tripping period.

Apply power and the green LED  $oldsymbol{0}$  will illuminate

### If Under voltage mode is selected

Relay energises / red LED 3 illuminate if the voltage is above the set "Trip Level". If the voltage falls below the "Trip Level", yellow LED **②** flashes for the set "Delay" then remains lit. Red LED extinguishes / relay de-energises.

Relay energises / red LED 3 illuminate if the voltage is below the set "Trip Level". If the voltage rises above the "Trip Level", yellow LED 2 flashes for the set "Delay" then remains lit. Red LED extinguishes / relay de-energises
