INSTALLATION AND SETTING

⚠ Installation work must be carried out by qualified personnel.

- BEFORE INSTALLATION, ISOLATE THE SUPPLY.
- Connect the unit as required.

Setting the unit.

- Set the "Range" ⚙ to the required position (depending on whether seconds, minutes or hours are required).
- Set the "Set %" adjustment ⚙ as required. The "Set %" is a % of the selected range; so for example, a 30% setting on the 1 – 10 hour range will give 3 hours.

Applying power.

- Apply power across terminals "A1" and "A2" and the green LED ① will start flashing indicating timing in progress.
- The relay will remain de-energised (contacts 15 / 16 closed and 15 / 18 open) and red LED ② extinguished.
- After the delay period "t" has elapsed, the relay will energise (contacts 15 / 16 open and 15 / 18 closed) and the red LED will illuminate.
- The green LED will remain permanently lit.
- The whole timing process is repeated by removing and re-applying power.

Note:

¹ In accordance with IEC 61812, the green LED is permitted to extinguish during a voltage dip or momentary interruption of the power supply providing the state of the output relay does not change. The dip / interruption duration and levels are defined in the product standard.
